

ZAIN UL ABEDIN

Full Stack Engineer | AI Engineer

+92 311 0861625 ◇ zain9175zain@gmail.com ◇ Lahore, Pakistan ◇ Website ◇ LinkedIn ◇ GitHub

PROFESSIONAL SUMMARY

Full Stack Engineer (MERN) and AI Engineer who builds LLM-powered applications with LangChain, LangGraph, RAG, CrewAI, the OpenAI SDK, and MCP, trains large language models on competitive programming and reasoning, and ships pull requests to large open-source React Native projects such as New Expensify and Joplin. Founder and maintainer of VoiceyBill, an open-source AI expense tracker, and mentor to 50+ engineers in one of Pakistan's largest developer communities. Strong across React, Next.js, React Native, Node.js, TypeScript, microservices, Docker, and Kubernetes, with excellent written communication and attention to detail.

EXPERIENCE

Founder & Open-Source Maintainer

Apr '26 — Present

VoiceyBill

Remote

- Built and released VoiceyBill, an open-source personal expense tracker spanning a mobile app, web app, and Node.js backend that lets users log income and expenses by voice.
- Integrated Uplift AI voice models and the OpenAI API to power voice input, AI receipt scanning, and smart auto-categorization, with analytics dashboards and scheduled email reports.
- Selected and run as a project in Dev Weekends Summer of Code (DSOC): opening issues, reviewing contributor pull requests, mentoring contributors, and selecting final contributors based on PR quality and codebase understanding.

Open-Source Contributor

Feb '26 — Apr '26

Joplin & Others

Remote

- Contributed to open-source projects including Joplin, an open-source note-taking application, submitting and shipping pull requests while preparing for Google Summer of Code (GSoC).
- Navigated large TypeScript and React Native codebases, fixed issues, and followed each project's contribution guidelines, code review, and testing standards.

LLM Trainer

Oct '25 — Jan '26

Turing

Remote

- Trained large language models (LLMs) to solve complex competitive programming problems and strengthen multi-step reasoning, producing high-quality proprietary data used for model fine-tuning and benchmark evaluation.
- Created, evaluated, and refined AI-generated code responses to ensure accuracy, efficiency, and alignment with high-quality coding standards across multiple programming languages.
- Designed multi-turn conversations and agent-completion scenarios that simulate realistic user–assistant interactions, including function-calling and tool use across apps such as calendar, email, maps, and drive.
- Authored edge-case scenarios and reference solutions, identifying model failure modes and iterating on examples to improve correctness, reasoning, and instruction-following.
- Followed detailed internal playbooks and formatting guidelines while collaborating with peers and reviewers to maintain consistency, clarity, and high quality across deliverables.

Open-Source Contributor

Jul '25 — Oct '25

New Expensify (Expensify/App)

Remote

- Contributed to New Expensify, a large, widely-used open-source React Native expense-management and financial-collaboration platform.
- Authored and submitted pull requests addressing UI and functionality issues across a production-grade, offline-first codebase built on the Onyx state-management library.
- Collaborated through GitHub code review, adhering to strict contribution standards, linting, and testing requirements.

SKILLS

AI Engineering LangChain, LangGraph, RAG, CrewAI, OpenAI SDK, MCP (Model Context Protocol), OpenAI API, Uplift AI (Voice), Prompt Engineering

LLM & Evaluation LLM Training & Evaluation, AI Response Refinement, Function-Calling / Tool Use, Reasoning, Competitive Programming

Web & Mobile HTML, Tailwind CSS, JavaScript, TypeScript, React, Next.js, React Native, Redux, Node.js, Express.js

Architecture, DevOps & Cloud Microservices, Event-Driven Architecture, NATS, REST APIs, Docker, Kubernetes, CI/CD, Jenkins, Nginx, AWS (ECS, ECR, S3, EC2), Google Cloud (GCP)

Databases & Open Source MongoDB, SQL, Redis, Git, GitHub, Pull Requests, Code Review, Open-Source Contribution

CS Fundamentals Problem-Solving, LeetCode 150+, DSA, OOP (C++), APIs, JSON

PROJECTS

Microservices Streaming Platform [Link](#)

Apr '26 — Jun '26

- Designed a microservices architecture in Node.js with independently deployable services communicating asynchronously through a NATS streaming server (event-driven), alongside REST APIs for synchronous calls.
- Containerized each service with Docker and orchestrated them on Kubernetes, enabling horizontal scaling, self-healing, and smooth rolling deployments.

Multi-Vendor E-Commerce — MERN App [Link](#)

Apr '25 — Jun '25

- Designed and developed a scalable multi-vendor e-commerce platform enabling vendors to register, list products, and manage orders.
- Implemented real-time chat with Socket.io and secure authentication/authorization using JWT and Clerk with email verification via NodeMailer.
- Built payment processing with Stripe and PayPal, complete order tracking, and a mobile-first responsive UI using Tailwind CSS, Material UI, and Swiper.js.
- Managed complex global state with Redux Toolkit and deployed via Docker and Jenkins CI/CD to Vercel and AWS EC2.

Mama Marketplace [Link](#)

Jan '25 — Feb '25

- Built a high-performance e-commerce backend in TypeScript with Node.js, Express.js, and MongoDB; added Redis caching to cut response time, PayRex for secure payments, and Cloudinary for optimized image uploads.

GDGoC UE Community Platform [Link](#)

Sep '24 — Oct '24

- Built a community platform for Google Developer Group On Campus (GDGoC UE) with an SEO-friendly Next.js frontend, scalable Node.js/Express backend, Clerk authentication, and Firebase image uploads.

EDUCATION

Bachelor in Computer Science, University of Education, Lahore (GPA: 3.5)

Present
Lahore

- Relevant Coursework: Data Structures & Algorithms, Object-Oriented Programming in C++, Networking.

HONORS & AWARDS

2nd Runner-Up, UE Code Quest

competed as a team and solved 4 of 5 problems in a timed coding competition.

LEADERSHIP & MENTORSHIP

- Mentor & Trainer, Dev Weekends — mentor 50+ aspiring engineers in one of Pakistan's largest developer communities (20k+ members); run weekly sessions on coding, DSA, and projects, and lead open-source projects through Dev Weekends Summer of Code (DSOC).
- Tech Lead, GDGoC-UE — organize workshops and community sessions and mentor students with practical guidance on real-world projects.
